10. Stability and reactivity

Reactivity	No information available.
Chemical stability	Stable under recommended storage conditions.
Possibility of hazardous reactions	Unstable if heated.
Conditions to avoid	Keep away from open flames, hot surfaces and sources of ignition. static discharge (electrostatic discharge). Storage near to reactive materials. Dust formation. Protect from moisture.
Incompatible materials	Strong oxidizing agents, strong acids, and strong bases.
Hazardous decomposition products	Do not use this pigment in polymers at temperatures over 200 °C (392 °F). Decomposition of diarylide pigments in polymers at temperatures over 200 °C (392 °F) may produce trace amounts of monoazo dyes, which in turn can decompose to produce aromatic amines . The amount and type of degradation products formed depend on the dwell time, formulation and processing conditions as well as temperature. As conditions become more severe, as when

temperatures move into the 240-300 °C (464-572 °F) range, trace quantities of 3, 3 dichlorobenzidine can be generated . 3, 3 dichlorobenzidine is classified as a suspect carcinogen by NTP and IARC , is classified as Acute Toxicity category 4 and Carcinogen Category 1 B according to 1272 2008 EC CLP, and is regulated by OSHA as a suspect carcinogen . In order to avoid the generation of and exposure to 3, 3 dichlorobenzidine , do not use diarylide pigments in polymers when temperatures exceed 200 °C (392 °F). Handle with care . Organic dusts have the potential to be explosive with static spark or flame initiation.
